

// SAP Business One Cloud has modules for everything we need, from logistics and finance to production. The system is complet.”

Henrik Höfde, Chief Financial Offier, Sansera Sweden.

Sansera maximizes time and flexibility with SAP Business One Cloud

Sansera specializes on the manufacturing and precision machining of metal. The company operates as a subcontractor and sales activities are directed exclusively towards the automotive industry. During the last five years, Sansera has used SAP as their ERP, but is now ready to move to the cloud based solution instead. Sansera hopes that this will create flexibility and the possibility to customize data to support future growth. The company also hopes that the new solution will save time in the management of orders and sales and for it to generate support for even faster decision making processes.

Challenges and Opportunities

- Modules outside of SAP were not integrated, which caused errors in the workflow.
- Reports took long time to generate.
- The environment was old, and there was a need for a more modern and robust solution.

Why SAP and Partner

- The solution is logical and easy to learn.
- As activites become more cloud based, there was a need for SAP to operate the entire server.
- Littlefish has provided great support since the implementation of the old environment.
- They have been responsive and the dialogue has been good all the way to the finished product.

Value-Driven Results

- Hopes that the new solution will save time in the management of orders and sales.
- Stronger support for decision making within sales, and more reliable order data.
- The possibility to report through customized reports and dashboards.
- Greater flexibility for the employees through better access to information.
