

# // We believe in SAP Business One and are confident that the system will help us grow."

Hung Huynh, CFO. Dragon Port Foods AB.

## Dragon Port sees no limits for future growth with SAP Business One

Dragon Port imports groceries from their suppliers in Asia and the products are sold to Asian restaurants in Sweden. As Dragon Port has its own chauffeurs, the company can make sure to deliver to their clients every week. When the organization expands, the data set increases with it. So does the complexity of the organization, and the old ERP could not keep up with this development. Dragon Port strives for future growth with SAP Business One and believes the system will help them to get there.

### Challenges and Opportunities

- The old system could not manage the large data set
- A need for further adjustments to meet the demands of the customers
- Fast growth created a demand for a new system

### Why SAP and Partner

- SAP allows for customizations that fit the individual needs of the company
- Easy to use and cost efficient
- Littlefish understands the needs of the company and keeps a good dialogue
- Wished for a local partner to make the communication more flexible

### Value-Driven Results

- Higher security, as the system is there when it is needed
- The business and the workforce is constantly growing, and SAP can manage that
- SAP can handle the increasing data set without performance issues
